57/75 marks

Mwalimu Amina · Fractions · Grade 5 · 29 April 2026

Your classroom runs on curiosity — you ask, you wait, and you let students reach the idea themselves.

MOMENTS WORTH REMEMBERING

“Who can show us another way to split this into equal parts?”

You opened the floor instead of handing over the answer — and several students jumped in. That is the moment the lesson became theirs.

Your strength

Questions that make students think

Your open questions pushed the class past recall into real reasoning — the heart of strong teaching.

Your next horizon

Reach every corner of the room

A few quieter students stayed on the edges. A quick think-pair-share would draw them in next time.

YOUR JOURNEY — 4 LESSONS TOGETHER

Four lessons in, your scores keep climbing — especially in how you involve your learners.

ONE THING TO TRY NEXT CLASS

Next class, try a 30-second think-pair-share before you take answers — it gives every student a way in.
