GRADE 3 · Math | Day 2 of 10 · 30 min · Mine

Read and write up to 9999 in numerals

Read and write numbers up to 9999 in numerals and in words, one place value at a time

TEACHING WAY Things → pictures → numbers

Opening

Ask: Partner A, point in the air and say the value of each place in 358: hundreds, tens, ones. Partner B checks, then swap. Now whisper-read one of 302, 410, 587 to your partner — be clearer than your own first try, not faster than anyone else.

Listen for: 3 hundreds, 5 tens, 8 ones — 358; then e.g. 'four hundred and ten'

A bicycle at the Sunday bazaar has a tag: Rs 4750. The seller must say the price aloud. Which word comes first, and how does he know? What goes wrong if he just reads the digits: four, seven, five, zero?

Ask: Where have you seen a big price tag — the bazaar, a motorbike shop, a fare board?

Ask: If the seller reads 4750 digit by digit, will the buyer know the real price?

WORDS

numeral — A numeral is a number written with digits, such as 1597. · **number word** — A number word tells the value of a numeral using words, starting with the greatest place value. · **thousands place** — The thousands place is the first place in a four-digit numeral · **expanded form** — Expanded form shows the value of every digit added together, such as 2000 + 500 + 70 + 3. · **digit** — A digit is one symbol from 0 to 9 used to write a numeral.

BOARD

Before the lesson, draw the four place-value columns on the whiteboard. Leave the number-name space empty until Guided Practice.

THOUSANDS | HUNDREDS | TENS | ONES
1 | 5 | 9 | 7
1 thousand + 5 hundreds + 9 tens + 7 ones
1,597
Number name: _____
Chalk reminder: start naming from the greatest place value.
WORDS: digit = ہندسہ | expanded form = پھیلی ہوئی شکل | thousands place = ہزاروں کی جگہ

Explanation · I Do 6′

1. **Write 1597 under the four column headings, one digit per column: 1 | 5 | 9 | 7.**

   Say: *This numeral is from Skill Sharpener row 1 on page 5. Before I read it, I give every digit its own place: 1, 5, 9, 7 — one under each heading.*

   Bachcho, dekho — 1597 ko columns mein likhta/likhti hoon. Har digit ki apni jagah hai: 1 thousands mein, 5 hundreds mein, 9 tens mein, 7 ones mein.

2. **Point to the 1 under THOUSANDS and write its value, 1000, below the column.**

   Say: *I start at the greatest place. The 1 is in the thousands place, so its value is one thousand — my number name starts with 'one thousand'.*

   Sab se bari place se shuru karta/karti hoon. 1 thousands mein hai, is ki value one thousand hai — naam 'one thousand' se shuru ho ga.

3. **Point to the 5, then the 9, then the 7; write 500, 90 and 7 below their columns.**

   Say: *The 5 means five hundred. The 9 is in the tens place, so it is ninety. The 7 means seven ones. Every word I say must match one digit's value.*

   5 ka matlab five hundred, 9 tens mein hai to ninety, aur 7 ones mein hai to seven. Har word aik digit ki value se match hona chahiye.

4. **Join the value names in order and write the full number name under the grid.**

   Say: *I join them in order: one thousand five hundred and ninety-seven. I never say 'fifteen ninety-seven' — the 1 and 5 sit in different places, so they can never be joined.*

   Ab jorta/jorti hoon: one thousand five hundred and ninety-seven. 'Fifteen ninety-seven' kehna ghalat hai, kyunke 1 aur 5 alag alag places mein hain.

Say: *Read from the greatest place to the smallest: thousands, hundreds, tens, ones — and check that every word matches the value of one digit.*

ANSWER

Write 2573 in words (Skill Sharpener row 2, p.5)

2 thousands = 2000, 5 hundreds = 500
7 tens = 70, 3 ones = 3
2000 + 500 + 70 + 3 = 2573

Answer: two thousand five hundred and seventy-three

Check: Ahmed says 1597 is "fifteen hundred and ninety-seven." What place-value mistake did Ahmed make?

If stuck: Return to the four board columns. Cover all but one digit at a time and ask students to say its value before saying the full number.

COMMON MISTAKE

Children read 1597 as 'fifteen ninety-seven', joining digits from different places.

Fix: Write each digit under its column heading first; say its value alone before joining, so 1 can only ever be 'one thousand'.

We Do 9′

Solve Discovery Playground p.5 together: partners whisper the four place values of 3495, then the class builds its number name word by word.

Ask: 'Which place do we name first?' Point at each digit; the class says its value before you write the word. Then check backward — does every word match one digit?

Using textbook p.5, Partner A reads a numeral aloud by place value; Partner B writes its number name and points to the digit each word matches. Swap after each numeral.

A: “I read ___ as ___: ___ thousands, ___ hundreds, ___ tens, ___ ones.” → B: “I agree/disagree — the ___ digit is worth ___. The full name is ___.”

ANSWER

Write 3495 in words (Discovery Playground, p.5)

3 thousands = 3000, 4 hundreds = 400
9 tens = 90, 5 ones = 5
Join in order from the greatest place

Answer: three thousand four hundred and ninety-five

Check: Where do you see four-digit numbers at home, in your street or at the bazaar — and why does reading every place matter there?

You Do 8′

Alone in their copies: write numerals in words, then sort 6274. Afterwards ask one child: 'How did you know which columns fit?'

1. **Write 743 in words.**
2. **Sort 6274. Which are true: thousands digit less than 4, hundreds digit odd, tens digit more than 6, even?**
3. **Write the numeral for 'one thousand six hundred and forty'.**

At a bazaar stall, Fatima reads a price tag showing Rs 802. Write the price in words.

Needs help: Write 520 in words. First put each digit under its heading — hundreds, tens, ones — then say each value before you write.

Ready for more: Write 1093 in words. Why does the 0 in the tens place get no word? Check: does 1093 fit the thousands-digit-less-than-4 column?

Check · exit ticket

Write 8264 in words.

Whole class in their copies. Write 8264 on the board; children write the name alone, 2 minutes.

You have it if every word you wrote matches one digit's value, and your numeral has all four digits in the right places.

Homework

p.5 Skill Sharpener row 1: expanded form to numeral

p.4 number-word practice: write 190 in words
