Performance Overview

Domain 1: Lesson Structure

14/16

1.1 Lesson Goal Clarity

@ 00:12 4/4

EVIDENCE

Teacher opened with the objective 'By the end of class you'll find an equivalent fraction for any fraction I give you' and tied it to the prior lesson on halves.

1.2 Fidelity to LP Steps

@ 05:40 3/4

EVIDENCE

Followed the connect-explain-model-guided-independent arc; minor logistical pause during material handout.

1.3 Materials Use

@ 08:20 4/4

EVIDENCE

Fraction strips and pizza-slice cutouts were introduced right when the doubling rule was named — the material carried the abstraction.

1.4 Time Management

@ 18:00 3/4

EVIDENCE

Pacing broadly on-plan; 4 minutes of independent work extended by ~90 seconds because of a sit-with-stuck-student move.

Domain 2: Instructional Quality

16/20

2.1 Explanation & Modeling

@ 06:15 4/4

EVIDENCE

Modeled $\frac{1}{2} = \frac{2}{4}$ on the board with a labelled diagram before generalizing to the $\times n$ rule.

2.2 Questioning Technique

@ 07:30 4/4

EVIDENCE

Recurrent 'How did you figure that out?' prompt after every right answer — reasoning, not the answer, became the currency.

2.3 Guided Practice

@ 09:10 3/4

EVIDENCE

Pair-talk on 'what equals half when the pizza is 8 pieces' gave the class a rehearsal before independent work.

2.4 Differentiation

@ 16:45 2/4

EVIDENCE

One quiet sit-with-stuck-student move; no planned extension task for early finishers.

2.5 Monitoring Understanding

@ 17:00 3/4

EVIDENCE

Circulated during independent work and paused to check three notebooks; no aggregate check-in.

Domain 3: Classroom Climate

13/16

3.1 Behavioral Climate

@ 01:20 3/4

EVIDENCE

Orderly, teacher used 'Sit down everyone' calmly at the transition; students settled within ~10 seconds.

3.2 Routines & Transitions

3/4

EVIDENCE

Transition into groups was signalled and orderly; material handout was smooth after brief queue at the corner.

PHOTO EVIDENCE

The classroom photo shows students seated in 5 groups of 4, materials (fraction strips and worksheets) evenly distributed on each table, and a whiteboard with the objective written top-left.

3.3 Respectful Interactions

@ 07:32 4/4

EVIDENCE

Frequent praise tied to specific behaviour ('Brilliant reasoning'); teacher invited student explanations by name.

3.4 Safety & Inclusiveness

3/4

EVIDENCE

Called on a mix of volunteers and non-volunteers; one very quiet student was not brought in.

Domain 4: Student Engagement

11/16

4.1 Cognitive Engagement

@ 10:20 3/4

EVIDENCE

Students articulated 'we doubled, so we doubled' — a student-generated statement of the equivalence rule.

4.2 Participation

3/4

EVIDENCE

About 60% of the class contributed at least one verbal turn; the same three hands led whole-class shares.

4.3 Collaboration

@ 09:15 3/4

EVIDENCE

Pair-talk was productive; groups formed only for material handout, not for cross-checking answers.

4.4 Use of Materials

2/4

EVIDENCE

Only ~half the groups actually manipulated the fraction strips; some used them as bookmarks.

PHOTO EVIDENCE

The classroom photo shows students seated in 5 groups of 4, materials (fraction strips and worksheets) evenly distributed on each table, and a whiteboard with the objective written top-left.

Domain 5: Assessment & Feedback

9/16

5.1 Formative Checks

2/4

EVIDENCE

No aggregate check (mini-whiteboard, thumbs, cold call for a rule) between guided and independent.

5.2 Quality of Feedback

@ 12:00 3/4

EVIDENCE

Feedback was specific and process-oriented on the moves that were checked ('You multiplied both by 5 — that's the key idea').

5.3 Accuracy of Marking

2/4

EVIDENCE

Only three notebooks reached during circulation; two of them contained an equivalent-fraction error that went unnoticed.

5.4 Responsive Instruction

2/4

EVIDENCE

No mid-lesson adjustment based on the check that didn't happen; plan proceeded as written.

ONE THING TO TRY NEXT CLASS

Next class, after every pair-talk, cold-call one non-volunteer before taking hands so the silent half of the room gets a turn at reasoning out loud.

Overall Feedback

A high-quality Class 6 maths lesson on equivalent fractions. The teacher used the "how did you figure that out?" prompt consistently, turning every right answer into a reasoning moment. The lesson would deepen further by cold-calling the silent half of the class and adding one aggregate formative check between guided and independent work.
