

Lesson Plan - Grade 5 Mathematics - Fractions (Equivalent Fractions)

Teacher: E2E Driver Duration: 40 minutes Class: Grade 5

Learning Objectives:

1. Students will identify equivalent fractions using fraction strips.
2. Students will explain why $\frac{1}{2}$ equals $\frac{2}{4}$ and $\frac{3}{6}$.
3. Students will generate two equivalent fractions for a given fraction.

Materials: fraction strips, chart paper, markers, whiteboard, student notebooks.

Prior Knowledge: Students can read and write simple fractions (halves, quarters).

Activities:

1. Warm-up (5 min): Show $\frac{1}{2}$ shaded on the board; ask what fraction is shaded.
2. Introduction (10 min): Fold paper strips into halves, quarters, eighths; compare.
3. Pair work (15 min): Each pair finds three fractions equal to $\frac{1}{2}$ using strips.
4. Whole-class (5 min): Pairs share findings; teacher records on chart paper.

Assessment: Exit ticket - write two fractions equivalent to $\frac{2}{3}$ and explain one.

Planned questions: What happens to the numerator and denominator when we double both?

Homework: Textbook page 42, questions 1-5.
