Performance Overview

Goal 1: Formative Assessment and Feedback

15/22

SMART Objectives

4/4

EVIDENCE

Lesson opened by stating the objective on the board and reading it aloud; objective was specific and measurable.

Teacher's Role

3/4

EVIDENCE

Teacher circulated during group work and prompted thinking, though a few groups were left unattended for several minutes.

Assessment

8/9

EVIDENCE

Frequent thumbs-up/down checks and one exit-ticket question; could add a quick mid-lesson check before the practice task.

Goal 2: Student Engagement

16/22

Cognitive Rigor

5/9

EVIDENCE

Most questions were recall ("what is chlorophyll?"). Few prompts asked students to reason or predict.

Real World Connections

4/4

EVIDENCE

Strong hook linking photosynthesis to why leaves are green and to food on the table.

Multimodality

4/5

EVIDENCE

Used a labelled diagram and a short demonstration; no hands-on student activity.

Addressing Misconceptions

3/4

EVIDENCE

Surfaced the "plants eat soil" misconception but moved on before fully resolving it.

Goal 3: Quality Subject Content

22/30

Prior Knowledge

7/10

EVIDENCE

Activated prior knowledge of plant parts before introducing the process.

Content Accuracy

9/10

EVIDENCE

Explanation of the light-dependent stage was accurate and clearly sequenced.

Coherence

6/10

EVIDENCE

Logical flow overall; the transition from the demo to independent practice was abrupt.

Goal 4: Classroom Management

10/14

Routines

6/7

EVIDENCE

Clear handout and grouping routines; transitions were quick and orderly.

Time on Task

4/7

EVIDENCE

Strong start; the last ten minutes lost some momentum during clean-up.

Goal 5: Supportive Learning Environment

8/15

Respect & Rapport

5/8

EVIDENCE

Warm tone; praised effort by name and invited quieter students to contribute.

Equitable Participation

3/7

EVIDENCE

A small group of students answered most questions; consider a cold-call or think-pair-share to widen participation.

Overall Feedback

A warm, well-paced lesson with strong student participation. The teacher opened with a clear objective and used a real-world hook that landed well. The biggest opportunity is to push for higher-order questioning — most questions were recall; a few "why" and "what if" prompts would lift cognitive rigor. Checking for understanding before moving on would catch the misconception about where plants get their mass.
